

To the chairwoman of “Safe Space”: A. Gabriadze

Address: Square V, Block VI, #46, Dighomi Massif, Tbilisi, Georgia

Tel: 2523530

As a respond of your statements made in 13. 09. 11 (№11/118698-7,№ 11/118709-25, №07/118693-25), Tbilisi City Hall Ecology and Greenery Planting City Department informs you to address the City Council about the designations of the Tbilisi gardens and squares but looking after them is our service workers' competence and is realized on the basis of the recommendation of the corresponding scientific institution specialists.

As for the other territories of Tbilisi, in particular, wither of pine-tree plants on the Kerchi street – the photo sanitary monitoring and the corresponding laboratory researches showed us that different kinds of wrecker-diseases were revealed on the withering conifers including “Shute” (that causes the early shed of conifers), Diplodioz, Patsidioz, kermeses, ordinary Pariana of pine-tree, etc. against which periodically was used the poison of a mixture of “Fastak” and “Kabriotop”.

The photo sanitary research will continue in future as well and the corresponding activities of agrotechnic and chemical measures will be fulfilled.

With regards

Head of the service

Giorgi Korkashvili
